Seattle, WA

SUMMARY

UX-focused full-stack engineer with 3+ years of experience designing and building AI-powered platforms and enterprise applications for global data-center supply chain and capacity planning. I work across research, interaction design, coded prototyping, frontend systems, UAT, and production iteration.

EXPERIENCE

Software Engineer I & II — Microsoft · Redmond, WA September 2022 – Present

- Designed and deployed an AI-powered order explicability workflow with Azure AI Foundry and Angular, replacing fragmented email triage with notifications, blocker evidence, reservation history, deeplinks, and guarded remediation; the broader program targeted an 8% improvement in on-time reservations.
- Architected a React and Cosmos DB plan-explicability experience that reduced a supported analysis cycle from 160 minutes to 10 minutes and carried an estimated savings of ~20 hours/month; presented results in a senior leadership review.
- Built a C# Azure AI Foundry plan-audit agent with agent-to-agent integration, PostgreSQL prefiltering, and dynamic query generation, reducing investigation time by 80% and distributing the implementation as a shared library.
- Engineered a DSPy Python agent with a Kubernetes-hosted feedback loop that generated advanced SQL drill-down queries and doubled the analytical capability of SQL-based report templates.
- Redesigned supply-chain analytics loading, reducing load time by 82% from 45 seconds to 8 seconds, growing active users by 30%, and reducing new-user ramp-up time by 50%.
- Built reusable React controls, visualizations, grids, and event contracts for an internal AI canvas, accelerating later team onboarding and supporting a 4–5× increase in daily adoption through UAT.
- Automated Azure provisioning with Bicep, deployment slots, feature flags, and Azure Front Door routing, enabling zero-downtime deployments and reducing rollback time by 40 minutes.

Software Engineering Intern — Microsoft · Redmond, WA May 2021 – August 2021

- Gathered requirements and delivered an issue-management MVP in 12 weeks, reducing deployment issue identification and mitigation time by 95%.

Explore Intern — Microsoft · Redmond, WA May 2020 – August 2020

- Built accessible reusable UI components that reduced development time by 99%, then used customer-success survey feedback to improve supplier workflows.

EDUCATION

B.S. Computer Science · UIUC 2022

GPA: 3.77 / 4.00 · Dean’s List · RTC Fellow

CERTIFICATIONS & AWARDS

Lean Six Sigma White Belt 2024

Microsoft Global Hackathon · 3rd Place 2021

SKILLS

- UX engineering:** Workflow research, interaction design, coded prototyping, agentic UI/UX, accessibility, UAT, telemetry
- Languages and frameworks:** C#, Python, TypeScript, SQL, Angular, React, DSPy, HTML, CSS
- AI and data:** Azure AI Foundry, A2A integration, dynamic query generation, DSPy, Power BI, product telemetry
- Cloud and delivery:** Azure App Service, Front Door, Application Insights, Bicep, Kubernetes, Cosmos DB, PostgreSQL, CI/CD
